Utah Department of Transportation workers clear the roads and debris that has fallen as the spring thaw begins. Travel down Provo Canyon this time of year because of the rocks

that break loose, and roll onto the highway, is dangerous. The clean-up being done here is just below the Hidden Meadows subdivision.

HEBER CITY (March 15) - Governor Norman Bangarter stressed what he called the three "E's" of government to local Republicans at a fund raising dinner held last Friday. The three Es, he said, represent the three areas of government his administration would emphasize: economic development, education, and efficiency in government.

Speaking about economic development, the governor noted that while many people in the state oppose expansion, he feels that it is a necessity. "The population of the state is growing," he said, "And we must provide the economic opportunities to support this growth. Since we have a higher than average birth rate we must grow economically in order to provide opportunities for our children."

Education will be a prime concern of the Bangarter administration. The governor pointed out that Utahns spend a greater percentage of their income for education yet, due to the higher birth rate, less per student than

other states. At the same time he pointed out, Utah students rank high on national test scores.

"This is what I like to call the miracle of Utah," the governor noted. "I feel good about education in this state and the educators are doing a good job. We have to continue to improve though. Our children will have to be well schooled in order for them to take advantage of the economic opportunities we hope to provide for them."
